

Kriangsit Pranee

FULL STACK JAVA DEVELOPER

Bangkok, Thailand • +66 62 458 7646 • kriangsitpranee@gmail.com
Portfolio: kriangsit-dev.github.io • GitHub: github.com/kriangsit-dev

PROFESSIONAL SUMMARY

Full Stack Java Developer and Computer Science graduate with hands-on experience building enterprise Corporate Internet Banking systems for Government Savings Bank (GSB) with Java and Spring MVC. Shipped real features on both the corporate-customer and bank-officer sides — maker–approver workflows, scheduled transactions, and approval controls — on an IBM DB2–backed banking platform. Previously delivered a production anesthetic electronic medical record system end to end during an internship, including JWT authentication, hospital API integration, and Dockerized deployment.

WORK EXPERIENCE

Full Stack Java Developer — IMAXX Solutions Co., Ltd. Jan 2026 – Aug 2026
Corporate Internet Banking (CIB) for Government Savings Bank (GSB), via MFEC (System Integrator) · corporate-customer (CF) & bank-officer (BF) fronts · Java / Spring MVC

- Enhanced the maker–approver workflow: built maker-selectable approver routing across all financial services (fund transfer, bulk transfer, bill payment, direct credit, EWHT, BahtNet) and authorizer roll-over of future-dated transactions within the effective-date window using the Quartz scheduler.
- Delivered a transaction-cancellation feature allowing users to void any service type that is pending approval or approved but not yet processed, with correct state handling across all transaction types.
- On the bank-officer admin front, implemented range-based approval-limit configuration and a registration flow supporting single-user (sole-proprietor) corporate accounts.
- Deployed WAR builds to JBoss/Tomcat and troubleshoot production issues via MobaXterm with Log4j2 log analysis; collaborated through GitHub code reviews on a bilingual (Thai/English) banking application.

Stack: Java, Spring MVC, JDBC, IBM DB2, JSP, Quartz, GitHub, MobaXterm, DBeaver, Eclipse

INTERNSHIP EXPERIENCE

Software Developer Intern — Phrapokklao Hospital, Chanthaburi May 2025 – Sep 2025
Pre/Post Anesthetic electronic medical record (eMR) system

- Built and deployed a full-stack Pre/Post Anesthetic record system into real use by the anesthesiology department, replacing paper-based records — using PHP, JavaScript, Tailwind CSS, Bootstrap, and MySQL (a demo version is open-sourced on GitHub).
- Implemented JWT-based authentication (HttpOnly cookies) with role-based access, admin user approval, and password reset, plus a secure server-side API proxy integrating hospital HIS data (patient, lab, vital signs, doctor).
- Designed a MySQL schema storing assessments as both raw JSON and print-ready text, pushed approved records back into the hospital HIS, and containerized the stack (PHP/Apache + MySQL 8 + phpMyAdmin) with Docker Compose.

Stack: PHP, JavaScript, JWT, Tailwind CSS, Bootstrap, MySQL 8, Docker, Docker Compose, Composer

TECHNICAL SKILLS

Languages	Java, PHP, JavaScript, SQL, HTML, CSS
Backend	Spring MVC, JDBC, JSP, Quartz, REST APIs, JWT
Frontend	Tailwind CSS, Bootstrap, HTML5, CSS3, JavaScript
Databases	IBM DB2, MySQL
DevOps & Tools	Git/GitHub, Docker, Docker Compose, Eclipse, VS Code, DBeaver, MobaXterm

EDUCATION

Bachelor of Science in Computer Science — Rambhai Barni Rajabhat University 2025

LANGUAGES

Thai — Native • English — Intermediate
